

Injection Test – Sum

Single Report:

1. Sensitivity to the Perturbation - this sections answers only the following questions:
 1. Did a perturbed output score higher than the gold output? If yes, which one.
 - a. Expected answer structure: Yes/No, if yes which one
 2. Were the scores similar for every injection?
 - a. Expected answer structure: similar if change rate difference $<10\%$, list similar scores
2. Suitability of {Name of the evaluation metric} for {Task the evaluation is tested on} - this section includes the following subsections only containing the requested instructions:
 1. Strengths: Include the variations in which the metric had a high change rate or higher ($\geq 70\%$).
 2. Weaknesses: Include the variations without high change rate or higher ($<70\%$).
 3. Recommendation: Yes if, the metric could detect every injection (non-summary) by having high change rate or higher ($\geq 70\%$), else no.
 4. Additionally, mention what needs improvements.
 - a. Expected answer structure: list injections without minimal scoring

Compare Report:

Do only the following:

1. here, present your recommendation that should have the most variants with high change rates.
 - a. Note: No punishment for several answers
2. In addition, explicitly state which metric you wouldn't recommend and why. A human wouldn't recommend a metric if the injections have no high change rates.
 - a. Note: No punishment for several answers
