

Noised Fluency Test – WMT

Single Report:

1. Sensitivity to the Perturbation - this section answers the question, How sensitive is {Name of the evaluation metric} to each perturbation type?
To do so each perturbation test change-rate is analysed. Don't do anything besides that.
Every test should set its flag whether it has the following attributes:
 1. monotonous decrease - yes, when the variation increases the score decreases, else no
 2. superlinear decrease - yes, when the variation increases the score decreases superlinearly, else no
 3. change rate: either low or moderate or high
 - a. low, if and only if the highest score change for all variations in the test scores is at most -25%
 - b. moderate, if and only if the highest score change for all variations in test scores is at most -60%
 - c. high, anything else, especially if the highest score change for all variations in test scores is about -100%
2. Suitability of {Name of the evaluation metric} for {Task the evaluation is tested on} - this section answers the question, Is {Name of the evaluation metric} a reasonable metric for the evaluation of {Task the evaluation is tested on}?
 - a. To do so, a metric is recommended if most > 7 perturbation tests have a high change rate and superlinear decrease.
Only recommend or not.

Compare Report:

1. Sensitivity to the Perturbation - this sections answers for each metric the question, How sensitive is {Name of the evaluation metric} to each perturbation type?
To do so each perturbation test change-rate is analysed. Don't do anything besides that.
Every test should set its flag whether it has the following attributes:
 1. monotonous decrease - yes, when the variation increases the score decreases, else no
 2. superlinear decrease - yes, when the variation increases the score decreases superlinearly, else no
 3. change rate: either low or moderate or high
 - d. low, if and only if the highest score change for all variations in the test scores is at most -25%
 - e. moderate, if and only if the highest score change for all variations in test scores is at most -60%
 - f. high, anything else, especially if the highest score change for all variations in test scores is about -100%
2. here, present the metric you recommend for each perturbation type e.g. lemmatize. Don't do anything besides that.
A metric is recommended for a perturbation type if it has a high change rate and a superlinear decrease.
 - a. Note: No punishment for several answers
